AlphaMeta

AlphaMeta is organic cereal food, which are derived from an organically grown, specially selected native strain of whole brown rice grain. Wholegrains are essential part of a nutritious diet. As wholegrains contain all parts of the grain (germ, bran and endosperm), it is healthier than refined grains.

Making wholegrain as part of your daily routine is a great way to help you maintain healthy lifestyle.

The Primitive Food for Human Being

Whole grains and cereals are the most natural food for human beings since thousands of years ago. They have been the main sources of nutrients for generations. Therefore, human health and longevity are closely associated with whole grains and cereals.

Rice is the source of nutrients that is intimately recognized by human body. Easily digested, hypo allergenic, and source of nutrients suitable for everyone.

The Premium Raw Material

a. Ecologically ecology organic farming

Preparation of agricultural land for ecologically balanced organic farming.
Cultivation by biological control; free of chemical pesticides and herbicides.

b. One-year of cultivation period

To ensure there is enough time for the growth of rice and full absorption of

c. Manual harvesting of rice

Harvesting rice by hand to avoid damage on the rice and the land,
reducing the destruction of nature.

Patented Technology

Unique stabilization method resulted from more than 15 years of research and development. Low temperature, high-pressure treatment on the rice immediately after being harvested in order to stop enzymatic activity in the rice, avoid the denature of nutrients as well as maintaining the bioactivity and integrity of the nutrients. Patented mechanical hydrolysis technology, to form highly reactive nutrients.

Organic Certifications

AlphaMeta is certified organic by USDA and EU, from cultivation to harvesting time point.

International Collaborative Research Partners

International Rice Research Institut

Phramongkutklao School of Medicine, Thailand

Choray Hospital, HCMC
